

VOIP Cisco Phone System

T1 Company LLC

VOIP Phone Solution.

Want an Enterprise phone system without the commitment of purchasing thousands of dollars of hardware and hiring someone to manage it?

We use Cisco Call Manger and Cisco Unity to offer every business a phone system with Enterprise features without the heavy price tag. Our system is housed in Cleveland, Ohio in a secure data center called [Switch & Data](#). The data center is backed up by UPS power distribution and a generator. This enables the phone system to be there answering calls even if your power or connection is down allowing your company to continue to operate during an outage. We also use Cisco equipment end to end to provide a high level of voice quality using QOS (Quality of Service) to prioritize voice traffic.

Standard features that come with our phone system are 4 digit dialing, site to site 4 digit dialing, call forward all, attended transfer, Call Park, Meet-Me Conference, on phone speed dials, individual voice mail, auto attendants, VM name directory and on phone corporate directory. Other features that each phone includes are call directories of missed calls, placed calls and received calls. Each user in your organization will also have their own personal extension. The system includes voicemail to email integration. This feature receives mail as a wav attachment allowing users to get voicemail on their Windows Mobile or Apple iPhone. We offer a range of end users phones to meet your needs be it a lobby phone, conference phones, executive phones, multi-line receptionist, remote VPN phones or wireless phones.

Enhanced Services that are offered with the system are Call Center, Call Recording, Paging and Cisco Meeting Place Voice and Data Collaboration. Call Center adds the ability to have agents that log in and out of a queue to answer incoming calls, also offers per user statistics and an extensive call history. Call Recording can be added to record all calls, just incoming or only outgoing calls and includes an interface to download and listen to the calls. Paging system can provide group paging, barge paging, warning system, text groups and overhead paging. Cisco Meeting Place can provide voice and data collaboration from the Cisco Phone or any phone in the world with the included toll free number.
